Contract Fabrication

Process Equipment Installation

Service Solutions Piping System Installation

This turnkey piping system installation is a quality example of the onsite services performed by **DFS**. We were contracted to design, install and commission the bulk chemical distribution system piping for a Solar Cell Manufacturing Facility. This system is all double-jacketed piping for Sulphuric Acid, Sodium Hypochlorite, Sodium Hydroxide, Sodium Sulphite & Sodium Chloride.

We work with stainless steel and plastics. We offer our customers the option to prefabricate and ship pieces for installation by others, or to have **DFS** provide a complete product with field installation by **DFS** for a straightforward product solution.

Innovative solutions
for all your critical process needs
